

# Tekskil Universal 19" Replacement LCD

## Replace your aging LCD Prompter with a Tekskil High Performance LED Replacement Prompter

Failing LCD prompter displays are a frequent headache for broadcasters – these critical talent support products lose contrast, go dim, or shut down altogether without warning.

Tekskil's RP prompter display is our solution for the multitude of stations fed up with the downtime and cost of unreliable prompter monitors. The RP is a purpose built replacement monitor engineered to end the headaches of failing displays with benchmark reliability, advanced features, installation ease and low cost.

**Reliability:** The RP monitor incorporates a high bright LED backlit display with twin cooling fans and DC power management, all housed in a rugged welded aluminum enclosure.

**Features:** The RP provides three image sizes – 15", 17" and 19" – user selectable from the built-in custom scaler. Enhanced contrast and panel brightness provide a crisp, easy to read talent display. Power consumption is minimized with long-life energy efficient LED edge lights. The Tekskil universal replacement monitor can be configured to replace your existing heads by simply switching the display size electronically - making it possible to optimize display size to the beamsplitter format and to actively reconfigure for tight versus distant shots.

**Installation:** The 19RP has the correct mounting hardware built in for simple replacement of those failing displays sold by other prompter companies.

**Cost:** The RP monitor is half the cost (or less) of similar displays, and comes with an unheard of 7 year warranty. We've built it to last and we're prepared to stand behind it.

### 19RP specifications
